

*New Coral Grow Cluster 8 East
Placed March 2001
Photo Oct. 2002*

An underwater photograph showing a coral grow cluster on a reef. The cluster is a dense, dark, branching structure of coral, surrounded by a lighter, sandy or silty substrate. The water is clear, and the overall scene is illuminated by natural light. The coral cluster is the central focus of the image.

*Giant Anemone on Reef Ball
Shallow Water West
Placed July 2001
Photo Oct.2002*

An underwater photograph showing a large, spherical reef ball. The surface of the ball is densely covered with bright green, branching fire coral. Numerous small, light-colored snail shells are scattered across the coral. The background is a dark, shadowed area, likely a crevice or the underside of the reef ball, with some blue water visible at the top right corner.
